

FAB LAB

Digital Fabrication

$\sqrt{\pi}$
 ∞

Fab lab STEM is an environment that promotes innovation and education by providing collaborative open maker space equipped with digital fabrication and prototyping machines & tools and hands-on workshops & training using MIT based curriculum. The school shares machines, tools, skills, resources and ideas to create new opportunities for economic and social benefit. All students are welcomed to use the digital fabrication machines at STEM Fab Lab to support the innovation and design work in all subject areas and capstone projects. With a goal of empowering the students in different sectors, students are encouraged to participate in designing and making the products they use such as physical objects and machines to materialize their ideas.
